

How to Add Templates of Forex Robots PRO in MetaTrader 4

Installing Forex templates follows nearly the same pathway as that of custom indicators, with the minor difference that the TEMPLATE files are attached to the “**Templates**” folder and not the Indicators folder. This is how it is done.

Step 1: Adding the Templates to the Right Folder

- Download and save the file
- Identify if the file is archived or in its normal format (right click on the file and select Properties, at the top it will say if it is a MetaQuotes Language 4 file. If it is not, it is most likely an archive)
- If the file is archived or zipped, make sure to **unzip** the file.
- First, open the instance of the MT4 Forex Trading platform, where you want to add the Template. When this is open, click on File on the top navigation menu, and then click on “Open Data Folder” in the drop-down menu. This will open the data folder on your computer.

Step 2: Add the Template(s) to the Data Folder

In the open Data Folder, click on Templates folder. This is the folder where the Template(s) will be added.
